Port Scan Report

MESample v1.3.0 — Nmap

Software	MESample 1.3.0
Tool	Nmap 7.80
Command	`nmap -sT -p 1-1000 127.0.0.1`
Purpose	Verify the delivered software does not introduce unexpected open network ports
Date	2026-09-09

1. Scan Results

PORT	STATE	SERVICE	Note
135/tcp	open	msrpc	Windows system default (RPC), unrelated to MESample
445/tcp	open	microsoft-ds	Windows system default (SMB), unrelated to MESample

2. Interpretation

The two open ports (135 msrpc, 445 microsoft-ds) are Windows operating-system default services (Remote Procedure Call and Server Message Block). They are present on any standard Windows host and are **not** introduced by MESample. The delivered software adds **no additional network port exposure**.

3. Conclusion

Item	Status
Unexpected open ports	**PASS — no additional exposure**
